Associate of Science in Information Technology — Full-Stack Development

Central Piedmont Community College | Charlotte, NC | Graduation: May 2026

Master's Degree in Science and Technology, Mechanical Engineering — Energy Engineering

Mouloud Mammeri University of Tizi-Ouzou | Algeria

Credential Evaluation: U.S. equivalent to a master's degree in mechanical engineering, completed by World Education Services, 2019

PROFESSIONAL EXPERIENCE

Universal Banker | Truist | Charlotte, NC | 2024 – Present

- Process high-volume teller transactions while maintaining strong cash accuracy, reconciliation standards, and customer service quality.
- Manage vault and TCR balancing activities in alignment with internal control procedures and branch operating requirements.
- Support operational risk management by following compliance policies, documenting activities accurately, and maintaining audit-ready records.
- Troubleshoot digital banking issues, assist clients with online banking access, activate debit and credit cards, and guide customers through technical account support needs.
- Pull system reports and document client interactions, service requests, and operational activities in internal banking systems.
- Submit stop payment forms, process foreign currency requests, and ensure documentation is completed according to banking procedures.
- Identify client needs and support relationship growth through checking, savings, CD, credit card, mortgage, and premier banking referrals.
- Conduct outbound check-in and lead follow-up calls to strengthen client relationships, support retention, and identify new service opportunities.

Manager Assistant / Sales Associate | Versona | Charlotte, NC | November 2020 – 2024

- Responded promptly to customer inquiries, using product knowledge and customer engagement skills to support sales growth.
- Promoted customer service excellence by resolving guest concerns, complaints, and suggestions efficiently.
- Contributed to continuous improvement and sales strategies that helped the team meet key sales and performance goals.
- Reviewed daily sales and gross profit reports to assess performance trends and support operational efficiency.
- Maintained inventory and stock levels to ensure products were available and organized to support sales operations.

FEATURED TECHNICAL PROJECT

Team Daily Tracker — Banking Operations Web Application

- Designed and developed a banking-focused web application inspired by branch performance tracking needs from Universal Banker experience at Truist. The application allows users to create an account, log in securely, and track daily work activities related to checking accounts opened, savings accounts opened, credit cards, CCGs, referrals, and outbound calls.
- **CRUD Functionality & Access Control:** Built full Create, Read, Update, and Delete functionality for daily activity entries. Users can create, edit, and delete only their own records while viewing team entries created by other users, supporting both data integrity and team visibility.
- **User Authentication & Database Design:** Implemented a user table with unique user IDs and passwords, registration functionality, login access, and user-specific data ownership to support secure account management and controlled system access.
- **Application Pages:** Created key pages including Create Account, Login, Dashboard, Add Entry, Edit Entry, Delete Entry, and Logout to deliver a complete user workflow from authentication to performance tracking.

- **Business Analysis Connection:** Translated real banking operations needs into system requirements, user workflows, data fields, and role-based access rules, demonstrating the ability to bridge branch operations, compliance awareness, and technical development.
- **Technical Portfolio:** Published web development coursework and projects through GitHub and GitHub Pages, including WEB115, WEB215, WEB250, SQL/PHP work, freeCodeCamp practice, Codecademy learning, and LinkedIn portfolio development.
